

Critical Information to Improve and Enhance Protocol Consistency, Procedural Outcomes and Skills Training Throughout the Organization

Tools to achieve and maintain the highest standards to support compliance

As part of its extensive Clinical Decision Support solutions portfolio, Elsevier offers healthcare institutions a rich collection of interactive skills and procedure protocols. These modules are based on the latest accepted procedures and skills practices and written by an experienced team of medical and nursing professionals from esteemed healthcare facilities.

Significantly, our Nursing Skills and Assessment and Medical Procedure Protocols were designed for and by clinicians and developed to work within the clinician's workflow and to enhance the competencies of your medical and nursing staffs, these tools provide:

- Authoritative, trusted content
- Customization tools to reflect institution-specific protocols
- Functionality to support an organization's own online nursing and medical policies and procedures
- Testing and assessment tools for competency management
- Standards-based skills and procedures information
- High-quality, step-by-step videos and demonstrations
- Implementation and training support

The best healthcare information from the world's most trusted source

Delivering evidence-based information through a simple, easy-to-use interface, Elsevier helps healthcare institutions and providers:

- Save valuable time by managing the assessment and testing process
- Enhance productivity for hospital managers and educators
- Achieve and maintain the highest standards to support compliance and regulatory compliance (Magnet, Joint Commission, ACGME, ABIM)

Award-winning and recognized by professional associations, these protocols promote both individual proficiency and organizational efficiency.
